For Cell Balancing/Measuring Inputs: Max. 0.250A Balancing Current

Reaction Time:
200% Load (0.500A) = ca. 20ms
300% Load (0.750A) = <10ms

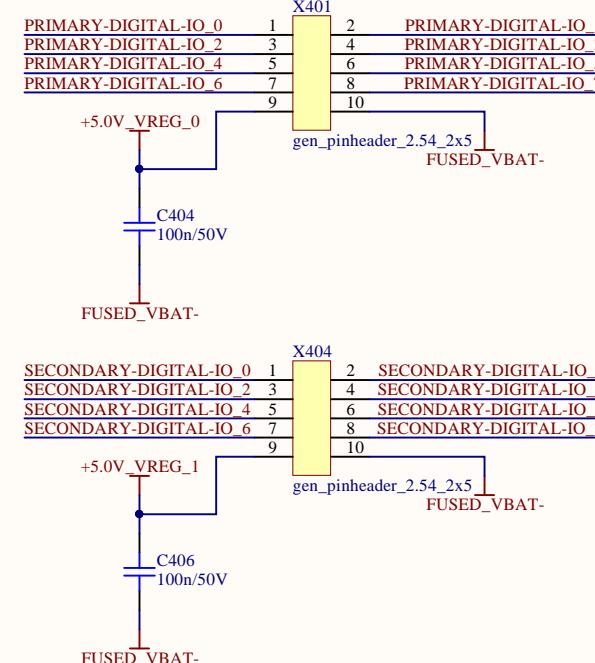

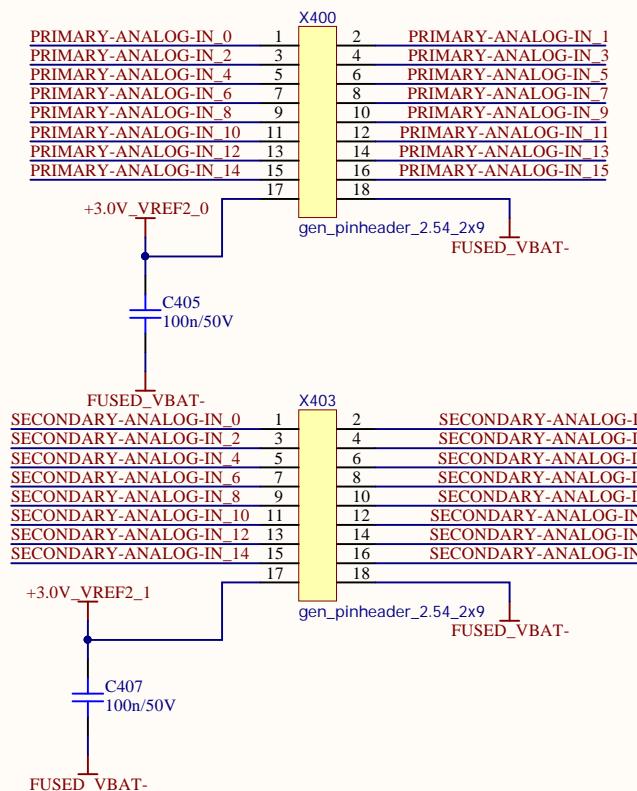

For Power Supply Inputs: Max. 0.500A Current

Reaction Time:
200% Load (1.000A) = ca. 200ms
300% Load (1.500A) = ca. 70ms

-3dB corner frequency of LTC6811 internal digital low-pass filter:

fast mode: 27kHz

normal mode: 6.8kHz

filtered mode: 26Hz

Grounded capacitor low-pass filter:

$C = 100\text{nF} \rightarrow f_g = 16\text{kHz}$

$C = 22\text{nF} \rightarrow f_g = 72\text{kHz}$

$C = 10\text{nF} \rightarrow f_g = 160\text{kHz}$ (recommended)

Differential capacitor low-pass filter (lower cost):

$C = 100\text{nF} \rightarrow f_g = 11\text{kHz}$

$C = 22\text{nF} \rightarrow f_g = 50\text{kHz}$

$C = 10\text{nF} \rightarrow f_g = 112\text{kHz}$

**Layout:**

- The transformer should be placed as close to the isoSPI cable connector as possible. The distance should be kept less than 2cm.
- The LTC6811 should be placed at least 1cm to 2cm away from the transformer.
- On the top component layer, no ground plane should be placed under the transformer, the isoSPI connector, or in between the transformer and the connector.
- The isoSPI signal traces should be isolated from surrounding circuits and traces by ground metal or space. No traces should cross the isoSPI signal lines, unless separated by a ground plane on an inner layer.

-3dB corner frequency of LTC6811 internal digital low-pass filter:
fast mode: 27kHz
normal mode: 6.8kHz
